

Serres is the progressive leader in smart fluid management solutions around suction. Supporting over 40,000 operations around the world each day, the Serres suction bag systems provide safe and reliable suction in all operations and areas of the hospital. Serres Nemo is designed to empty the suction bags' content into the sewer with minimal effort. Together, our suction bag system and fluid disposal equipment offer a compatible solution for smart fluid management in hospitals, making the whole process safe, hygienic and cost-effective.

Smart fluid management from suction to disposal

Existing practices for collecting and disposing medical fluid waste with canisters are due for an overhaul

A common method for collecting medical fluid waste involves single-use canisters. Manual assembly of the canisters on-site takes time and is prone to human error.

Disposing of medical fluid is typically done by manually opening the canisters and pouring the contents down the drain, exposing staff to contamination risk. Another common but extremely expensive practice is to dispose of entire canisters of surgical fluid as red bag waste.

New best practices for low / medium volume cases

There is a better way to collect and dispose of medical fluid waste. By using soft suction liners instead of rigid single-use canisters hospitals benefit from easy assembly, secure connections and efficiencies in storage and transport.

Serres Nemo is designed for on-site disposal of fluid medical waste. Connected to a water and sewage line, Serres Nemo flushes the contents of the Serres soft suction liners into the sewer in only 20 seconds. At the end of the cycle, the empty suction bag is removed and disposed of in accordance with the hospital-specific instructions.

Together, Serres suction bags and Serres Nemo provide a closed system for fluid management that benefits the hospitals in multiple ways:

- **Hygiene:** the Serres solution cleans up the whole process around suction, minimizing the risk of exposure and contamination.
- **Cost savings:** Serres Nemo creates value disposal-by-disposal, reducing waste disposal costs by up to 97%.
- **Sustainability:** the Serres solution uses less plastics, requires fewer references and reduces waste, making it a sustainable solution for hospitals.

As a forward-thinking pioneer of fluid management solutions, Serres is constantly innovating to remain on the cutting edge of the healthcare industry. Serres is a leading suction bag manufacturer outside the US. Our headquarters are in Finland, and we serve our customers in more than 50 countries through our global distributor network. Our US operations are based in Springfield, Mass. More information at www.serres.us.
