“Serres Nemo fluid disposal equipment improves hygiene and smooths daily procedures.”

Christine Aulbur
Klinikum Gütersloh
Germany
Since Serres Nemo was introduced at Klinikum Gütersloh, it has made the management of infectious hospital waste not only easier but also safer.

"Serres Nemo is very useful, because it is easy to use. One of its advantages is that we don't come into direct contact with hazardous liquid waste anymore," Christine Aulbur says.

She works as a cleaner at Klinikum Gütersloh and knows what she's talking about, as Aulbur and her co-workers are responsible for the hospital's operating rooms.

"Using Serres Nemo makes our work more hygienic, because we don't need to wash and sterilize the canisters by hand anymore — we simply place the suction bag into Serres Nemo, and the equipment takes care of the rest," Aulbur adds.

Serres Nemo empties the bag in just 20 seconds, Aulbur explains, and shows us how to use the system.

Aulbur places a used suction bag into Serres Nemo, closes the lid and presses the start button. The empty bag is then thrown away.

"After doing this once or twice, you know how to use the equipment. New co-workers learn it quickly," Aulbur says.

As the entire process takes less than a minute, Serres Nemo is a welcome time-saver. With more time on their hands, hospital staff can focus where it matters most.

"We're very satisfied with Serres Nemo — it would be great to have more of these in the future," Aulbur concludes.
